## CMOS 4-Bit Magnitude Comparator

### High Voltage Types (20-Volt Rating)

**CD4585B** is a 4-bit magnitude comparator designed for use in computer and logic applications that require the comparison of two 4-bit words. This logic circuit determines whether one 4-bit word (Binary or BCD) is "less than", "equal to", or "greater than" a second 4-bit word.

The CD4585B has eight comparing inputs ( $A_3, B_3$ , through  $A_0, B_0$ ), three outputs ( $A < B, A = B, A > B$ ) and three cascading inputs ( $A < B, A = B, A > B$ ) that permit systems designers to expand the comparator function to 8, 12, 16.....4N bits. When a single CD4585B is used, the cascading inputs are connected as follows: ( $A < B$ ) = low, ( $A = B$ ) = high, ( $A > B$ ) = high.

Cascading these units for comparison of more than 4 bits is accomplished as shown in Fig. 13.

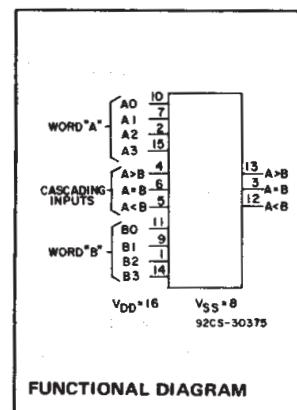

The CD4585B types are supplied in 16-lead hermetic dual-in-line ceramic packages (D and F suffixes), 16-lead dual-in-line plastic packages (E suffix), and in chip form (H suffix). This device is pin-compatible with low-power TTL type 7485 and the CMOS types MC14585 and 40085.
